

## iPOD HI-FI

Apple seeks to extend their control over your digital media by extending its unrelentingly Bauhaus-inspired product design into your home with the iPod Hi-Fi. Complete with eggshell-white airtight casing, docking station and remote control and iTunes connectivity, its NASA-like acoustic engineering will turn even the most horrible of your musical tastes into something bearable...even that horrible clown music known as reggaeton.

## K&N 2006 CIVIC SI INTAKE SYSTEM

K&N Filters is proud to announce its release of the Typhoon Intake System for the 2006 Honda Civic Si, Part No: 69-1012TP, which K&N advertises as making as much as 9 horsepower to the wheels. This widely-anticipated application showcases K&N's High-Flow Technology and engineering leadership by incorporating a billet MAF adaptor for maintaining a reliable and consistent stoichiometric air flow ratio as well as an internal redirect plate for further optimized air flow reading accuracy. The Si intake system uses a Grivory™ velocity stack for reduced weight and vibration as well as improved laminar airflow to both the MAF redirect plate and intake tube. As with other Typhoon applications, the new Si system also incorporates K&N's famous under-hood heat shielding, together with a unique air pickup that works with the stock inlet hose making this a true cold air system.

## AXIO HARDCASE LAPTOP PROTECTION

We've been rocking the Axio backpacks for a while now. Rolling around SEMA with my carbon-fiber Swift pack got me plenty of compliments. To complement their packs, Axio has expanded its range with these trick, low profile protective cases. Given that my life is on my laptop I'll take all the protection I can get. The case also comes with a shoulder strap with "guitar hooks." Perfect for those times you want to roll down to Starbucks and pretend to work while

staring at the hot chicks cruising by. Available in carbon fiber, of course, but it's the pearl white version that's sure to get you play with the ladies.

## CANON ZR700

Ninja-sized, the new Canon ZR700 has everything you need to point and shoot: built-in light for dark situations (you know...like in the bedroom); Image Stabilizer technology to help with shaky hands; powerful 25x optical zoom along with present zoom settings; and a High Resolution Widescreen capture that can fit even the fattest of friends. Save photos directly to an SD card for easy transfer or just plug it in via firewire or USB, whatever floats your boat. The ZR700 is ready for urban combat, letting you capture all of life's fleeting...or drifting moments. [WWW.CANONUSA.COM](http://WWW.CANONUSA.COM)

## CALIBRE BY K40 GUARANTEED STEALTH RADAR PROTECTION

K40 remotely installed radar detector systems have long been known as the top of the line solution to avoiding speeding tickets. Not that we endorse that kind of thing. Drive the limit we say. We often see K40 systems touted in classified ads for high-end exotics as a bonus feature so they must be good, right? The benefits of a remote system over a dash mounted detector include security—can't be picked up by the valet parker, and stealth—some states don't allow radar detectors and most troopers will up the ante on a ticket if they see one in the car. Calibre is K40's latest system and it is the first to bring to market innovative use of Bluetooth technology to connect the bumper mounted detector modules with the hidden radar receiver and stealth warning lights. So this means an easy install with minimum wiring. Plus everything is controlled by a small wireless remote control unit. Calibre's datadyne radar detection is state of the art and will detect all police radar frequencies, especially the newer DSP Ka band radar guns. K40 is so convinced that it works that they'll pay any and all radar speeding tickets one year after purchase. Can't argue with that. If you speed of course!
